## Revision History

Name	Date	Reason for Changes	Version
Draft	03/02	Initial document	1.0

# 1. Introduction

## 1.1. Purpose

The purpose of this document is to present a detailed description of the Exam Management System. It will explain the functions, the interfaces of the system, what the system will do, the constraints under which it must operate and how the system will react to external stimuli. This document is intended for both users and developers of the system and will be submitted to Professor Xiao Chen as a requirement for the CS5391 Survey of Software Engineering on Spring 2016 semester.

## 1.2. Scope

The Exam Management System is a software system that will be used by the faculty members and students of the Computer Science department of Texas State University. The system will help the faculty members and students to track the student progress and determine when and if the student can graduate according to graduation requirements.

More specifically, the system is designed to allow the faculty members to login and create the core, programming, and communication exams. Once the exams are created, the faculty member can view the details of the registered students, edit and view each exam details and publish the results. The system is also designed to assist a faculty member to manage student record information. The system will allow faculty member to add, edit, view, and search the student record information, including the exam results. The system will also allow the faculty to view all students that have completed all the graduation requirements, therefore eligible to graduate.

The system is also designed for students, who can login, register or withdraw from an specific exam, and view its results for all exams.

## 1.3. Definitions, acronyms, and abbreviations

Term	Definition
Student	A student of the Texas State University with access to the Exam Management System.
Faculty	Professors from the Texas State University with access to the Exam Management System
Exam	Written Exam provided by the Texas State University and taken by the students as a requirement for graduation
UI	User Interface
HTML	Markup Language rendered by modern web browsers
CSS	Cascading Style Sheets used for definition web pages appearance
Javascript	Programming language interpreted by modern web browsers

## **1.4. References**

IEEE. IEEE Std 830-1998 IEEE Recommended Practice for Software Requirements Specifications. IEEE Computer Society, 1998.

## **1.5. Overview**

The next chapter - Overall Description - of this document gives an overview of the functionality of the product. It describes the informal requirements and is used to establish a context for the technical requirements specification in the following chapter.

The third chapter - Specific Requirements - of this document is written primarily for the developers and describes in technical terms the details of the functionalities of the product.

Both sections of the document describe the same software product in its entirety, but are intended for different audiences and thus use different language.

## 2. Overall Description

### 2.1. Product Perspective

The Exam Management System is a new web-based application and does not depend or is a part of any other system. It has two different actors: the faculty member and the students. Both students and faculty members need a compatible web browser (a list of supported browsers is provided on section 2.1.2) and internet access to access the system. The user interface is responsible for calling the backend server in order to correctly get information and handling that information to show on the screen. The backend server provides services and uses a database management system to save data.

#### 2.1.1. User interfaces

Since the Exam Management System is a web-based application, the UI will be served in HTML, CSS and Javascript to be interpreted by a capable web-browser. Each user will see a different menu, after logging in, showing only the functions they are allowed to access. The UI should be designed in a way that a faculty member or a student should be able to use all functions after 1h of training.

#### 2.1.2. Software interfaces

PostgreSQL v9.5.1 will be used as a Database Management System for the Exam Management System.

Compatible web-browsers: Chrome, Firefox and Safari.

### 2.2. Product Functions

The online exam management system can be accessed by Texas State faculty members and students. The system will assist in tracking the progress of the students and determine whether the student is ready to graduate or not.

The system will provide different functions for both faculty members and the students. This section outlines the use cases for faculty members and students pictured on Figure 1.

#### 2.2.1. Shared use cases

**Use case:** Login

**Actors:** Faculty and Student

**Brief description:** The faculty or the student login to the system

**Initial step-by-step description:**

Before this use case can be initiated, the Faculty or the Student has already accessed the exam management system.

1. The system will show a login form with username and password
2. The faculty member or the student enters its username and password and click login
3. The system performs the login and redirects to a home page with a menu that has all functions accessible by the user according to its role.

*Fig. 1. Summary of use cases*

### 2.2.2. Faculty use cases

**Use case:** Create Exam

**Actors:** Faculty

**Brief description:** The Faculty creates an exam

**Initial step-by-step description:**

Before this use case can be initiated, the Faculty has already logged in to the system.

1. The system show up a form with required data to create an exam:
  - Exam type: programming, communication or core
  - Exam date in format of yyyy-mm-dd
  - Exam start time in a 24 hr format of HH:MM:SS
  - Exam end time in a 24 hr format of HH:MM:SS

- Semester (Fall, Spring)
  - Exam location
  - Registration deadline in a format of yyyy-mm-dd
2. The Faculty enters the required data to the form
  3. The Faculty clicks on Create Exam button
  4. The system creates the exam.

**Use case:** Exam Options**Actors:** Faculty**Brief description:** The Faculty lists all exams previously created.**Initial step-by-step description:**

Before this use case can be initiated, the Faculty has already logged in to the system.

1. The system shows a list with all previously created exams
2. The Faculty can see the information of the exam including:
  - Exam type: programming, communication or core
  - Exam date in format of yyyy-mm-dd
  - Exam start time in a 24 hr format of HH:MM:SS
  - Exam end time in a 24 hr format of HH:MM:SS
  - Semester (Fall, Spring)
  - Exam location
  - Registration deadline in a format of yyyy-mm-dd
3. The Faculty can choose to perform an action from this list for any exam:
  - View Registered for Exam
  - Edit Exam
  - Enter Exam Results
  - View Exam Results
  - Publish Exam Results

**Use case:** View Registered for Exam**Actors:** Faculty**Brief description:** The Faculty views all students registered for a particular exam**Initial step-by-step description:**

Before this use case can be initiated, the Faculty has already accessed Exam Options

1. The system shows a list with all students registered for a particular exam and the total number of students
2. The Faculty can see the information of the students including:
  - Username
  - Texas State ID
  - Last name
  - First name
  - Results (registered or not)
  - Comments

**Use case:** Edit Exam**Actors:** Faculty**Brief description:** The Faculty edits an exam**Initial step-by-step description:**

Before this use case can be initiated, the Faculty has already accessed Exam Options

1. The system shows a form with the exam required data already filled up with the selected exam data:
  - Exam type: programming, communication or core
  - Exam date in format of yyyy-mm-dd
  - Exam start time in a 24 hr format of HH:MM:SS
  - Exam end time in a 24 hr format of HH:MM:SS
  - Semester (Fall, Spring)
  - Exam location
  - Registration deadline in a format of yyyy-mm-dd
2. The Faculty can edit any information
3. The Faculty clicks the Save button
4. The system saves the new data to the exam

**Use case:** Enter Exam Results

**Actors:** Faculty

**Brief description:** The Faculty enters results for a particular exam

**Initial step-by-step description:**

Before this use case can be initiated, the Faculty has already accessed Exam Options

1. The system shows a list of all students registered for a particular exam showing only the Texas State ID.
2. The Faculty can add the result for each student (noshow, passed, failed)
3. The Faculty clicks the Save button
4. The system saves the results for the exam

**Use case:** View Exam Results

**Actors:** Faculty

**Brief description:** The Faculty views the results for a particular exam

**Initial step-by-step description:**

Before this use case can be initiated, the Faculty has already accessed Exam Options

1. The system shows a list with all students registered for a particular exam showing the student information including:
  - Username
  - Texas State ID
  - Last name
  - First name
  - Result (noshow, passed, failed)
2. The system shows statistics including:
  - Total results
  - How many passed
  - How many failed
  - How many noshow

**Use case:** Publish Exam Results

**Actors:** Faculty

**Brief description:** The Faculty publishes the result for a particular exam

**Initial step-by-step description:**

Before this use case can be initiated, the Faculty has already accessed Exam Options

1. The system prompt for confirmation regarding whether the Faculty wants to publish the results or not

2. The Faculty chooses to publish the results
3. The system publishes the results by making it available to the students

**Use case:** View Students

**Actors:** Faculty

**Brief description:** The Faculty views all students

**Initial step-by-step description:**

Before this use case can be initiated, the Faculty has already logged into the system.

1. The system shows a list with all students registered on the system showingg information including:
  - Username
  - Texas State ID
  - Last name
  - First name
  - Major
  - Email
  - Result of programming exam
  - Result of communication exam
  - Result of each core exam
  - Exam history (exam name, exam date, exam result)

**Use case:** Add new Student

**Actors:** Faculty

**Brief description:** The Faculty adds a new student

**Initial step-by-step description:**

Before this use case can be initiated, the Faculty has already logged into the system.

1. The system shows a form with required data for student creation including:
  - Username
  - Texas State ID
  - Last name
  - First name
  - Major
  - Email
  - Result of programming exam
  - Result of communication exam
  - Result of each core exam
  - Local phone
  - Local address
  - Local city
  - Local state
  - Local zip
2. The Faculty fills up the form with the required data
3. The Faculty clicks on save student
4. The system creates the new student

**Use case:** Search Student

**Actors:** Faculty

**Brief description:** The Faculty searches for a student

**Initial step-by-step description:**

Before this use case can be initiated, the Faculty has already logged into the system.

1. The system shows a form with required data for student searching including:
  - Username
  - Texas State ID
  - Last name
  - First name
  - Major
  - Email
  - Result of programming exam
  - Result of communication exam
  - Result of each core exam
2. The Faculty fills up the form with the required data
3. The Faculty clicks on search
4. The system shows a list of students filtered by the search criteria

**Use case:** Edit Student

**Actors:** Faculty

**Brief description:** The Faculty edits student

**Initial step-by-step description:**

Before this use case can be initiated, the Faculty has already logged into the system.

1. The system shows a form with username and Texas State ID fields
2. The Faculty fills up either of the fields to search for the student
3. The system shows a form with the student data for editing including:
  - Last name
  - First name
  - Major
  - Email
  - Programming exam result
  - Communication exam result
  - Each core exam result
  - Local phone
  - Local address
  - Local city
  - Local state
  - Local zip
4. The Faculty edits the desired fields
5. The Faculty clicks the save button
6. The system saves the student data

**Use case:** Change Exam Result

**Actors:** Faculty

**Brief description:** The Faculty changes the result of exams for a particular student

**Initial step-by-step description:**

Before this use case can be initiated, the Faculty has already logged into the system.

1. The system shows a form with username and Texas State ID fields
2. The Faculty fills up either of the fields to search for the student
3. The system shows a form with the student exams results including:
  - Result of programming exam
  - Result of communication exam
  - Result of each core exam

4. The Faculty fills up the form with the desired data
5. The Faculty clicks on save results
6. The system saves the new results to the student record

**Use case:** View Completed

**Actors:** Faculty

**Brief description:** The Faculty views the students who have passed all exams

**Initial step-by-step description:**

Before this use case can be initiated, the Faculty has already logged into the system.

1. The system shows a list with all students that have passed programming exam, communication exam and each core exams. The results are displayed with the following information:
  - Username
  - Texas State ID
  - Last name
  - First name
  - Major
  - Email
  - Result of programming exam
  - Result of communication exam
  - Result of core exams

### 2.2.3. Student use cases

**Use case:** Register for Exam

**Actors:** Student

**Brief description:** The Student registers for an exam

**Initial step-by-step description:**

Before this use case can be initiated, the Student has already logged into the system.

1. The system shows all exams opened for registration
2. The Student choose the exam to register
3. The system shows a form with the required data for registration including:
  - Username
  - Texas State ID
  - Last name
  - First name
  - Major
  - Email
  - Local phone
  - Local address
  - Local city
  - Local state
  - Local zip
4. The Student clicks on the register button
5. The system registers the student on the desired exam and makes it available for the Faculty in the View Registered for Exam function

**Use case:** Withdraw from Exam

**Actors:** Student

**Brief description:** The Student withdraw from an exam

**Initial step-by-step description:**

Before this use case can be initiated, the Student has already logged into the system.

1. The system shows all exams the user is registered
2. The Student chooses the exam to withdrawn
3. The Student clicks on the Withdraw from Exam button
4. The system removed the student from the desired exam and removes the Student from the result on the View Registered for Exam function

**Use case:** View Student Exam Results

**Actors:** Student

**Brief description:** The Student views its results on the exams

**Initial step-by-step description:**

Before this use case can be initiated, the Student has already logged into the system.

1. The system shows exam results of the Student

### **2.3. User Classes and Characteristics**

The users are faculty members and students from the Texas State University. They are supposed to have high education degrees and know how to use a web browser.

### **2.4. Constraints**

The Student can only graduate if he/she has passed the programming, communication and core exams.

## 3. Specific Requirements

### 3.1. Functions

#### 3.1.1. Shared Functions

##### 3.1.1.1. Login

<b>Function</b>	Login
<b>Description</b>	The Faculty or the Student login to the system. The user enters username and password and submits the form. The system verifies the username and password. If the username and password is correct, it redirects the user to a home screen showing a list of functions the user is allowed to perform according to its role, otherwise it shows errors messages describing the error.
<b>Inputs</b>	Username, Password
<b>Source</b>	Username and password are input by the user
<b>Outputs</b>	Redirection to home screen, error messages
<b>Destination</b>	The Exam Management System API. The username and password are sent to the the API, that checks whether they are correct and login the user to the system or return error messages.
<b>Pre-condition</b>	The login page is displayed on the user's screen
<b>Post-condition</b>	The user is logged into the system and gets redirected to his home page or error messages are displayed on the user's screen.
<b>Side-effects</b>	None

#### 3.1.2. Faculty Functions

##### 3.1.2.1. Create Exam

<b>Function</b>	Create Exam
<b>Description</b>	The Faculty creates an exam. The Faculty enters exam data and clicks Create Exam button. The system validates the data and creates the exam or respond with error messages.
<b>Inputs</b>	Type (Programming, Communication or Core), Date (yyyy-mm-dd format), start time and end time (24hr format HH:MM:SS), Semester (Fall, Spring), Location, Registration deadline (yyyy-mm-dd format)
<b>Source</b>	The type, date, start time, end time, semester, location and registration deadline are input by the user.
<b>Outputs</b>	New exam identifier, redirection to home screen, error messages
<b>Destination</b>	The Exam Management System API. The exam data is sent to the API, that validates the data and save the exam to the database or return error messages.
<b>Requires</b>	Logged user with Faculty role.

<b>Pre-condition</b>	The user clicks the Create Exam function and the Create Exam page is displayed on the user's screen.
<b>Post-condition</b>	The exam is created and gets redirected to the home page or error messages are displayed on the user's screen.
<b>Side-effects</b>	None

### 3.1.2.2. Exam Options

<b>Function</b>	Exam Options
<b>Description</b>	The Faculty lists all previously created exams. The system shows a list of all previously created exams and a list of functions for each exam.
<b>Inputs</b>	None
<b>Outputs</b>	Information for each exam: Type (Programming, Communication or Core), Date (yyyy-mm-dd format), Start and end time (24hr format HH:MM:SS), Semester (Fall, Spring), Location, Registration deadline (yyyy-mm-dd format). List of functions: View Registered for Exam, Edit Exam, Enter Exam Results, Publish Exam Results
<b>Destination</b>	None
<b>Requires</b>	Logged user with Faculty role.
<b>Pre-condition</b>	The user clicks the Exam Options function and the Exam Options page is displayed on the user's screen.
<b>Post-condition</b>	None
<b>Side-effects</b>	None

### 3.1.2.3. View Registered for Exam

<b>Function</b>	View Registered for Exam
<b>Description</b>	The Faculty views all students registered for a particular exam. The system shows a list of students registered for a particular exam.
<b>Inputs</b>	Exam identifier
<b>Source</b>	The exam identifier from the database.
<b>Outputs</b>	Information for each student: Username, Texas State ID, Last name, First name, Results (registered or not), Comments
<b>Destination</b>	The Exam Management System API. The exam identifier is sent to the API and it returns the list of students registered.
<b>Requires</b>	Logged user with Faculty role.
<b>Pre-condition</b>	The Exam Options page is open and the user clicks on the View Registered for Exam button.
<b>Post-condition</b>	The View Registered for Exam page is displayed on user's screen with a list of students registered for it.
<b>Side-effects</b>	None

**3.1.2.4. Edit Exam**

<b>Function</b>	Edit Exam
<b>Description</b>	The Faculty edits an exam. The system shows the current exam information. The user edits the desired information. The user clicks the Save button. The system saves the changed data or respond with error messages.
<b>Inputs</b>	Exam identifier, Type (Programming, Communication or Core), Date (yyyy-mm-dd format), Start and end time (24hr format HH:MM:SS), Semester (Fall, Spring), Location, Registration Deadline (yyyy-mm-dd format)
<b>Source</b>	Exam type, date, start time, end time, semester, location, registration from the database or input by the user. Exam identifier from the database.
<b>Outputs</b>	Redirection to Exam Options, error messages
<b>Destination</b>	The Exam Management System API. The changed exam data is sent to the API, it validates the data and save to the database or return error messages.
<b>Requires</b>	Logged user with Faculty role.
<b>Pre-condition</b>	The Exam Options page is open and the user clicks on the Edit Exam button.
<b>Post-condition</b>	The exam gets updated with the new information or error messages are displayed.
<b>Side-effects</b>	None

**3.1.2.5. Enter Exam Results**

<b>Function</b>	Enter Exam Results
<b>Description</b>	The Faculty enters results for an exam. The system shows a list of students registered for the exam showing only the Texas State ID. The user enters the results for each student (noshow, passed, failed). The user clicks the Save button.
<b>Inputs</b>	Texas State ID, Exam identifier, exam result
<b>Source</b>	Exam result is input by the user. Texas State ID and exam identifier from the database.
<b>Outputs</b>	Redirection to Exam Options, error messages
<b>Destination</b>	The Exam Management System API. The results are sent to the API, that validates it and saves to the database or return error messages.
<b>Requires</b>	Logged user with Faculty role.
<b>Pre-condition</b>	The Exam Options page is open and the user clicks on the Enter Exam Results button.
<b>Post-condition</b>	The results are saved to the database or error messages are displayed.
<b>Side-effects</b>	None

**3.1.2.6. View Exam Results**

<b>Function</b>	View Exam Results
<b>Description</b>	The Faculty views results for an exam. The system shows a list of students registered for the exam and a summary of the exam results..
<b>Inputs</b>	Exam identifier
<b>Source</b>	Exam identifier from the database.
<b>Outputs</b>	Username, Texas State ID, Last name, First name, Result (noshow, passed, failed). Total Results, How many passed, How many failed, how many noshow.
<b>Destination</b>	The Exam Management System API. The exam identifier is sent to the API that returns a list of students with individual result and the summary.
<b>Requires</b>	Logged user with Faculty role.
<b>Pre-condition</b>	The Exam Options page is open and the user clicks on the View Exam Results button.
<b>Post-condition</b>	The student list with individual results and summary are displayed on the user's screen.
<b>Side-effects</b>	None

### 3.1.2.7. Publish Exam Results

<b>Function</b>	Publish Exam Results
<b>Description</b>	The Faculty publishes results for an exam. The system makes the results available to the students.
<b>Inputs</b>	Exam identifier
<b>Source</b>	Exam identifier from the database.
<b>Outputs</b>	None
<b>Destination</b>	The Exam Management System API. The exam identifier is sent to the API that makes the results available to the students.
<b>Requires</b>	Logged user with Faculty role.
<b>Pre-condition</b>	The Exam Options page is open and the user clicks on the Publish Exam Results button.
<b>Post-condition</b>	None
<b>Side-effects</b>	The results for the selected exam becomes available for the students.

### 3.1.2.8. View Students

<b>Function</b>	View Students
<b>Description</b>	The Faculty views all students. The system shows a list of all students in the system.
<b>Inputs</b>	None
<b>Source</b>	None

<b>Outputs</b>	Username, Texas State ID, Last name, First name, Major, Email, Result of programming exam, Result communication exam, Result of core exam, Exam history (exam name, exam date, exam result)
<b>Destination</b>	None
<b>Requires</b>	Logged user with Faculty role.
<b>Pre-condition</b>	None
<b>Post-condition</b>	The student list with all data is displayed on the user's screen.
<b>Side-effects</b>	None

### 3.1.2.9. Add new Student

<b>Function</b>	Add new Student
<b>Description</b>	The Faculty adds a new students. The Faculty enters student data and clicks Save student.
<b>Inputs</b>	Username, Texas State ID, Last name, First name, Major, Email, Result of Programming Exam, Result of Communication Exam, Result of Core Exams, Local phone, Local address, Local city, Local state, Local zip.
<b>Source</b>	Username, Texas State ID, Last name, First name, Major, Email, Result of Programming Exam, Result of Communication Exam, Result of Core Exams, Local phone, Local address, Local city, Local state, Local zip is input by the user.
<b>Outputs</b>	Student identifier.
<b>Destination</b>	The Exam Management System API. The student data is sent to the API that validates and saves the student to the database or return error messages.
<b>Requires</b>	Logged user with Faculty role.
<b>Pre-condition</b>	None
<b>Post-condition</b>	The new student is created to the database.
<b>Side-effects</b>	None

### 3.1.2.10. Search Student

<b>Function</b>	Search Student
<b>Description</b>	The Faculty searches for a student. The Faculty enters search data and clicks Search. The system shows a list of students in the database according to the search criteria.
<b>Inputs</b>	Username, Texas State ID, Last name, First name, Major, Email, Result of Programming Exam, Result of Communication Exam, Result of Core Exams.
<b>Source</b>	Username, Texas State ID, Last name, First name, Major, Email, Result of Programming Exam, Result of Communication Exam, Result of Core Exams are input by the user.

<b>Outputs</b>	Each student information: Username, Texas State ID, Last name, First name, Major, Email, Result of Programming Exam, Result of Communication Exam, Result of Core Exams.
<b>Destination</b>	The Exam Management System API. The search data is sent to the API that search for students using that search criteria and return the result.
<b>Requires</b>	Logged user with Faculty role.
<b>Pre-condition</b>	None
<b>Post-condition</b>	The student list in the database according to the search criteria is displayed on the user's screen.
<b>Side-effects</b>	None

### 3.1.2.11. Edit Student

<b>Function</b>	Edit Student
<b>Description</b>	The Faculty edits a student. The Faculty enters Username or Texas State ID and click search. The system loads the student information. The Faculty edits the student information except for username and texas state ID and clicks Save student.
<b>Inputs</b>	Username, Texas State ID, Last name, First name, Major, Email, Programming Exam Result, Communication Exam Result, Each core exam result, Local phone, Local address, Local city, Local state, Local zip
<b>Source</b>	Username, Texas State ID, Last name, First name, Major, Email, Programming Exam Result, Communication Exam Result, Each core exam result, Local phone, Local address, Local city, Local state, Local zip are input by the user.
<b>Outputs</b>	None
<b>Destination</b>	The Exam Management System API. The student data is sent to the API that validates and save it to the database or return error messages.
<b>Requires</b>	Logged user with Faculty role.
<b>Pre-condition</b>	None
<b>Post-condition</b>	The student gets updated with the new information or error messages are displayed.
<b>Side-effects</b>	None

### 3.1.2.12. Change Exam Result

<b>Function</b>	Change Exam Result
<b>Description</b>	The Faculty changes the result of exams for a student. The Faculty enters Username or Texas State ID and click search. The system loads the student information. The Faculty edits the result information clicks Save Results.
<b>Inputs</b>	Username, Texas State ID, Programming Exam Result, Communication Exam Result, Each core exam result.
<b>Source</b>	Username, Texas State ID, Programming Exam Result, Communication Exam Result, Each core exam result are input by the user.

<b>Outputs</b>	None
<b>Destination</b>	The Exam Management System API. The result data is sent to the API that validates and save it to the database or return error messages.
<b>Requires</b>	Logged user with Faculty role.
<b>Pre-condition</b>	None
<b>Post-condition</b>	The student results gets updated with the new information or error messages are displayed.
<b>Side-effects</b>	None

### 3.1.2.13. View Completed

<b>Function</b>	View Completed
<b>Description</b>	The Faculty views the students that have passed all exams. The system shows a list with all students that have passed all exams.
<b>Inputs</b>	None
<b>Outputs</b>	Information for each student: Username, Texas State ID, Last name, First name, Major, Email, Result of programming exam, Result of communication exam, Result of core exams
<b>Destination</b>	None
<b>Requires</b>	Logged user with Faculty role.
<b>Pre-condition</b>	None
<b>Post-condition</b>	The students that have passed all exams are displayed on the user's screen.
<b>Side-effects</b>	None

### 3.1.3. Student Functions

#### 3.1.3.1. Register For Exam

<b>Function</b>	Register for Exam
